PTP 670

Fixed Wireless Backhaul

Service providers, government public safety agencies, and critical infrastructure operators such as utilities and energy companies have experienced massive growth in bandwidth demands for reliableand secure broadband connectivity and backhaul. The nature of these deployments for small-cell backhaul, disaster recovery, video surveillance and Wi-Fi backhaul drive variety of deployment topologies.

Now with the Point-to-Point (PTP) 670 Series solution, Cambium Networks combines best-in-class spectral efficiency and reliability with high-capacity multipoint (HCMP) deployment flexibility. With up to 450 Mbps aggregate throughput, PTP 670 systems let you flexibly, reliably and securely handle today's needs.

FLEXIBLE, SPECTRALLY-EFFICIENT, SELF-OPTIMISING SUB-6 GHz SOLUTION

Based on our widely deployed, field-proven non-line-of sight (NLOS) technology, PTP 670 wireless Ethernet bridges offer an array of features that give you more capacity, greater operational flexibility, and the highest spectral efficiency in the industry. PTP 670 systems provide 4.9 to 6.05 GHz, multi- band flexibility in a single radio and operate in channel sizes from 5 to 45 MHz.

With Dynamic Spectrum Optimisation (DSO), PTP 670 systems are constantly optimising the channel of operation to maximise link reliability and performance. The systems can provide up to 99.999% availability in virtually any environment, including non-line-of-sight, long-distance line-of-sight, high interference, over water and desert, and through extreme weather conditions. As a result, you can deliver more throughput with less spectrum and less investment in even the most challenging environments

HIGH-CAPACITY MULTIPOINT AND POINT-TO-POINT IN SINGLE SOLUTION

With the PTP 670, operators now have the flexibility to deploy not only in Point to Point topologies but also in High-Capacity Multipoint (HCMP) Applications. HCMP allows for up to 8 remote nodes to connect to a single master radio opening up new deployment models that enable rapid deployment, simplify planning and by using the same hardware regardless of topology a rapid return on investment in equipment and training.

Whether your organisation is an enterprise, government agency, or service provider, PTP 670 systems are ideal solutions for a wide array of applications such as T1/E1 and fiber replacements or extensions; video surveillance backhaul; LTE, macro-cell, and small-cell backhaul; last-mile access; disaster recovery; network redundancy; and building-to-building campus connectivity.
